WHITEBOX · TOOL TRIGGER ANALYSIS

Analysis Report

crosshair — tool not triggered

QA EKS · whitebox-cell-001 · generated 29 Oct 2026, 14:12

VERDICT	PRIORITY	CONFIDENCE
Planning defect	Medium	High

1 Executive summary

wb-orchestrator excluded crosshair 0.0.60 during planning: verdict INCOMPATIBLE, reason CUSTOMER_CODE_INCOMPATIBLE_WITH_EXECUTION_ENV - "customer code version is unresolved; a provider that executes customer code may not run against an unproven environment".

2 Run details

RUN ID	86a8ebb0-b28e-411e-82f2-74b467dfdf63
TOOL	crosshair 0.0.60
TENANT	d606c2bf-6761-4df3-b33c-00f32026c165
NAMESPACE	whitebox-cell-001
ANALYSIS	Rule-based extraction from QA EKS logs

REPORT FACTS SUPPLIED

```
Tool: crosshair, Python 3.13. Repo Python_Corpus_Tool_Triggering, branch PY_V313_POETRY_PIP_MONO.
0 Celery tasks scheduled; no S3 output folder.
```

3 Evidence from QA EKS

TIME (UTC)	SERVICE	EVENT
2026-10-27 15:27:40	cell-001-wb-orchestrator	activities.planning: planning.compatibility_excluded

TOOL	crosshair 0.0.60
VERDICT	INCOMPATIBLE
REASON	CUSTOMER_CODE_INCOMPATIBLE_WITH_EXECUTION_ENV
DETAIL	customer code version is unresolved; a provider that executes customer code may not run against an unproven environment
FAILED AXIS	EXECUTES_CUSTOMER_CODE: INCOMPATIBLE - customer code version is unresolved
PLATFORM HINT	{"providerId": "WorkerProvider", "runtimeFamily": "python", "runtimeVersion": "3.11"}

POD HEALTH

All pods Running with 0 restarts.

4 Root cause

> wb-orchestrator excluded crosshair 0.0.60 during planning: verdict INCOMPATIBLE, reason CUSTOMER_CODE_INCOMPATIBLE_WITH_EXECUTION_ENV - "customer code version is unresolved; a provider that executes customer code may not run against an unproven environment".

What this means: the planner could not prove the customer code version is compatible with any execution environment, so it dropped every tool that executes customer code.

5 Hypotheses (unverified)

None.

6 Recommended fix

OWNER	Platform (wb-orchestrator environment resolution)
ACTION	Find out why the customer code version stays unresolved/non-exact for this repo and fix the resolution (or pin exact versions in the repo's lockfile); then confirm the tool lands on an eligible worker environment.

7 QA acceptance criteria

- [ ] On re-run, a worker task is created for crosshair (no compatibility_excluded event for it).
- [ ] S3 receives a valid crosshair output JSON for the run.
- [ ] The taxonomy gate metric for this tool changes from FAIL to PASS / EVALUATED.

8 Gaps and limits

- Earliest log still available on the cluster: 2026-10-29T00:00:00+00:00. Older runs cannot be analyzed from kubectl.
